

## OEM Alpha Thermostat direct Display

The OEM Alpha Thermostat direct Display is a high-quality room thermostat in modern design for the registration and regulation of the desired room temperature, offering maximum user comfort.

The OEM Alpha Thermostat direct Display is available for the operating voltages 24 V and 230 V. A simple room-by-room temperature control is already possible with directly connected actuators. In conjunction with the connection unit OEM Alpha Basis direct, a perfectly matched overall system for surface temperature adjustment can be realized.

The setting of the desired room temperature, and the operation, can be performed comfortably via a rotary control with rotary-push action and soft ratchet. The well-structured and language-neutral display of the high-quality display always clearly indicates all symbols.

Different versions can be chosen in order to comply with the desired requirements. The standard version, without decorative panel, already shows a convincing and modern design. A decorative panel is available for the OEM Alpha Regler direct Display in order to round off the attractive appearance. Customer-specific differentiation is also possible.

In addition to our numerous internal function and quality tests, all Möhlenhoff products are tested by independent testing institutes.

The CE identification documents that the products that the products placed on the market comply with the applicable requirements of the EU Directives.

The product is certified by the TÜV Rheinland.

## 4 System visualisations

A selection of possible system variants for the realization of a room-by-room temperature control is shown in the following. A stand-alone system can already be performed with an OEM Alpha Thermostat direct Display and with directly connected actuators. A maximum of five actuators can be directly connected to the room thermostat. An individualisation of the room-by-room temperature control can be realized by adding to the system of compatible components, as e. g.

- the OEM Alpha Basis direct,
- the OEM Alpha Thermostat direct Analogue, and
- the thermal actuator of the type A 20x05 (230 V) or A 40x05 (24 V) with a power input of 1 watt

## 5 Installation notes

The installation of the OEM Alpha Thermostat direct Display can be performed in a few simple, comfortable and intuitive steps.

### 5.1 Installation place

A freely accessible area is recommended for installation in order to allow the OEM Alpha Thermostat direct Display to detect the correct room temperature. There must be no obstacles and additional heat sources at the installation position which could affect the measuring of the exact room temperature.

### 5.2 Installation

The OEM Alpha Thermostat direct Display is installed comfortably on-surface or in a flush-type box in a few simple steps.

### 5.3 Electric connection

The wiring between the OEM Alpha Thermostat direct Display and the components to be connected is realised with a multi-core cable.

#### Standard

#### Comfort

#### Control

- Mains connection
  - Voltage supply via OEM Alpha Basis direct or via a separate voltage source
- Reduction input (Standard variant)
  - Reception of an external timer signal for a time-controlled room temperature reduction
- Reduction output (Control variant)
  - Forwarding of the switching signals of the internal weekly timer to other components of the OEM Alpha direct: System
- Change Over input
  - Toggle between heating and cooling via an external signal (potential-free contact)
- Connection for actuators
  - Two wiring possibilities for the neutral conductor
    - The neutral conductor can be wired directly from the supply or via the internal connection terminal N'. In the wiring diagrams, the wiring via the connection terminal N' is identified with a fine dashed line.
  - Integrated valve protection function
    - A cyclic activation of connected actuators once every 14 days for 10 minutes prevents the valves from clogging during periods without temperature regulation
    - Will be triggered once every 14 days for 10 minutes after the last triggering.
  - Integrated antifreeze function
    - Avoids the freezing of lines during times without temperature control (e. g. in case of longer absence)
    - Inactive in cooling operation
- Connection of external sensor
  - For monitoring the room or floor temperature, and minimum floor tempering
